

### **Laboratory Services in Home Science Department:**

1. **Food and Nutrition Laboratory:** The Food and Nutrition Laboratory is well-equipped with modern facilities to support practical sessions and demonstrations. It provides students with hands-on experience in culinary arts and nutrition-related experiments. The laboratory includes a range of kitchen appliances and utensils, such as ovens, refrigerators, microwaves, gas ranges, food processors, mixers, slicers, cutting boards, and weighing machines. Additionally, there are food storage containers, storage racks, and shelving to organize ingredients and materials effectively. The cooking equipment and serving ware enable students to prepare and present various dishes. Safety is also a priority, with the presence of fire extinguishers to handle emergencies.
2. **Apparel and Designing Laboratory:** The Apparel and Designing Laboratory is well-furnished with essential tools and equipment required for clothing design and creation. Students can hone their skills in fashion design and clothing construction using facilities such as sewing machines, iron machines, tape measures, and dressmaker dummies. These resources allow students to explore various aspects of apparel design, pattern making, and garment construction.

**Departmental Library:** Apart from the well-equipped laboratories, the Home Science Department also offers a dedicated departmental library. This library provides valuable resources, including books, journals, and reference materials related to home management, food science, nutrition, apparel design, and related subjects.
